

Professional Installation, Nationwide

Contracted, certified installers

Continental US + Puerto Rico

Typical scheduling within 7 days

Every FTS installation runs through our network of contracted, certified installers.

Covering the continental US + Puerto Rico with no added travel fees.

Whether it's a single GPS tracker or a fleet-wide rollout, installation is built into the FTS process, not left for your team to figure out.

For fewer than 5 installs per site, additional fees may apply

Standard Installation

One install of a GPS tracker, FleetCam® Essential, or FleetCam® Pro — around 20 minutes for a tracker, 30 for a plug-and-play camera, 45 for hardwire, plus 5 minutes of calibration and verification for each.

Removal Service

Full removal of existing hardware — disconnecting, removing all components, and filling any holes left behind — when new FTS product is being installed at the same visit. Removed hardware goes to the customer, not back to FTS.

Add-On Installation

Adding an aux camera, LCD, input, or output to an existing FleetCam Essential or Pro. Add-ons can be installed alongside a new base unit in the same visit, or added later to a unit already in the field.

FleetCam Cargo Installation

One install of a FleetCam® Cargo Camera, including the door sensor and required calibration.

Custom Installation Service

For installation needs outside the standard scope — individually quoted.

Custom Professional Service

For configuration, training, or consulting handled by the FTS Professional Services team rather than an in-field installer — individually quoted.
