

Integrate Your OEM Fleet for Full Visibility

Your fleet is already generating rich vehicle data — FTS brings it straight into IntelliHub®. Get full visibility alongside every other vehicle on the platform, with nothing new to install.

Bulk onboarding by VIN list

Access full suite of vehicle alerts

No additional hardware required

Supports Ford, GM, Stellantis, and Toyota

Capture and monitor rich vehicle ECU data

No Hardware to Install

If the vehicle already reports through the OEM telematics systems from Ford, GM, Stellantis, or Toyota¹, FTS can pull that data straight into IntelliHub — no additional hardware install required.

Turn It On, Fleet by Fleet

Activation is just a flip of a switch once the OEM's fleet portal grants access. Onboard the whole fleet at once with a VIN list, or activate vehicles individually as needed and track your entire fleet through a single pane of glass.

See Full Vehicle Activity

Access full vehicle activity, including location, odometer, fuel level, engine diagnostics and DTCs, ignition status, idle time, and much more — the same depth of data as a hardware-equipped vehicle.

Your Starting Point, Not Your Ceiling

OEM data gets a vehicle into IntelliHub with zero install — but you don't have to stop there. Add FleetCam® video, temperature and asset sensors, Field Warrior® for your mobile workforce, or DriveShield® driver coaching whenever the fleet's ready, all on the same platform.
