

**Warning**

- Never mount the antenna edge (red line) against metal. Doing this will block GPS and cellular signal.

**1 Choose a location****Do**

- Face the **solar panel toward the sky** with **direct sunlight**.
- Mount **externally** when possible: **flat on the roof** or **facing outward**.
- Mounting the **back on metal** is **fine** (e.g., trailer roof or door).

**Avoid**

- The **antenna edge** against a **metal rail, lip or frame**.
- Sealed **metal enclosures** or **heavy metal coverage**.
- Limited or **inconsistent sunlight**; it reduces charging and performance.

**2 Mount the device****Mounting screws (recommended)**

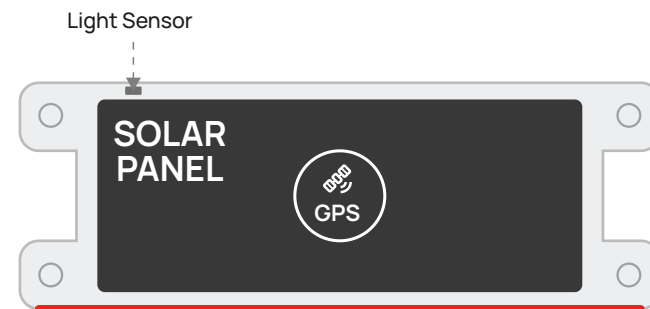

- Clean the mounting surface before mounting.
- Install the **4 self-tapping screws** (included) through the **integrated mounting tabs**.
- Mount into a **solid surface (steel preferred)**. **Do not overtighten**; this can crack the housing.

**VHB tape**

- Clean the surface with **rubbing alcohol** before applying.
- Keep the tape **below the caution line** so the **light sensor** **stays uncovered**.

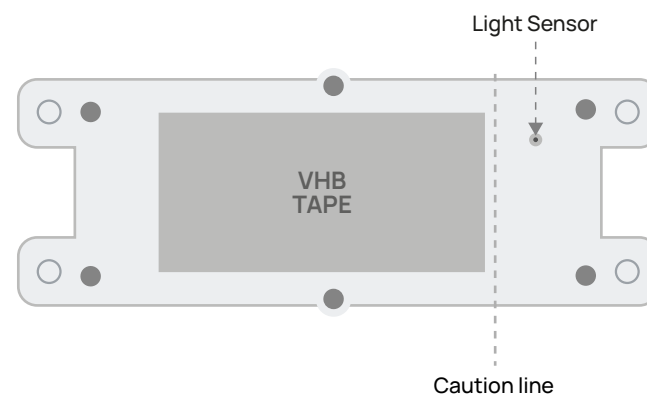

**3 Keep the panel and sensor clear**

- **Solar panel**: keep it **clean and uncovered**; dirt or debris will prevent charging.
- **Light sensor** (back of device): **do not cover** it with VHB Tape. When mounted against a wall it stays covered; **detected light** may indicate **removal or tampering**.

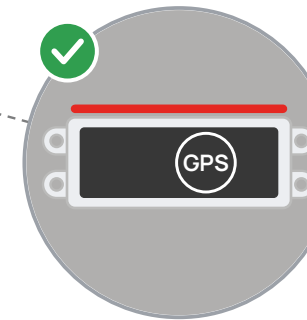

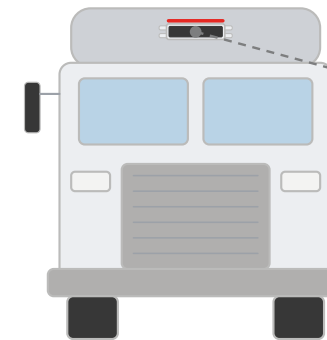

**Front**

Keep this edge clear of metal to ensure a strong GPS and cellular signal.

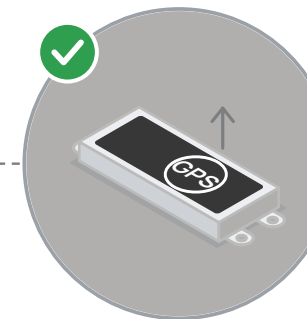

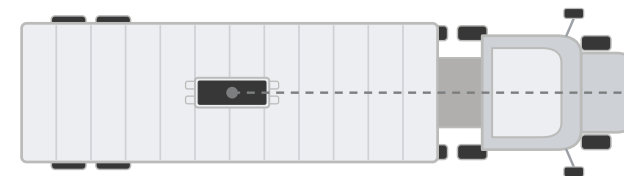

Edges and the back of the device can be mounted against metal.

**Back****Before you leave the site**

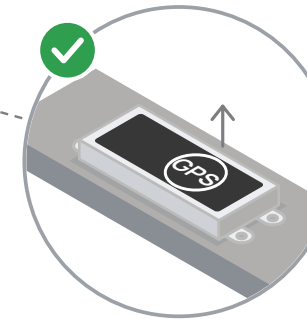

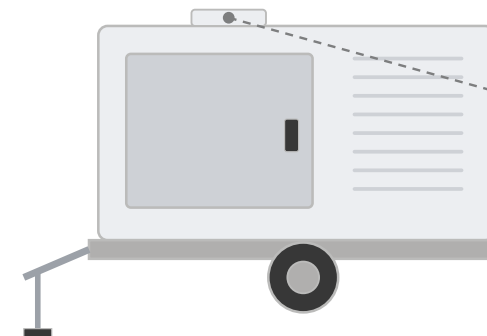

- Make sure the **face** of the device **points up to the sky** for best GPS signal.
- Make sure **all screws** are **tight**.

**Where to mount**

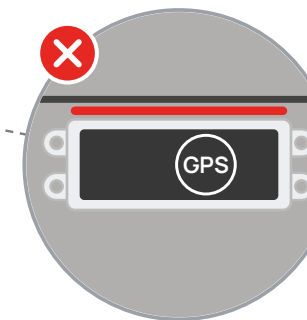

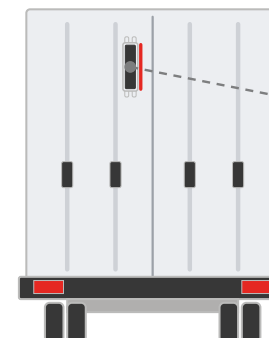

**Do:**  
Facing out with access to light, e.g., on the cab roof fairing.

**Do:**  
Flat on the trailer roof with a direct view of the sky.

**Do:**  
On top of the enclosure with the solar panel facing the sky.

**Don't:**  
Mount on the rear doors with the antenna edge against metal (lock rods, door frame).
